

In this template we list supplier names and their addresses in a list running down the page. We use a 'for-each' command in the Grp:Supplier field to loop through them and a corresponding End Supplier field to close the loop.

Field Name	Contents	Description
Grp:Supplier	for-each:G_VENDOR	Used to loop through the group members
Supplier 1	VENDOR_NAME	Supplier Name
1 Long Avenue	ADDRESS	Address
End Supplier	end for-each	Ends the loop

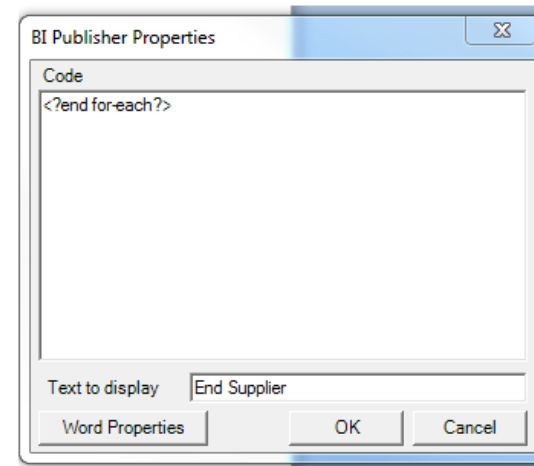

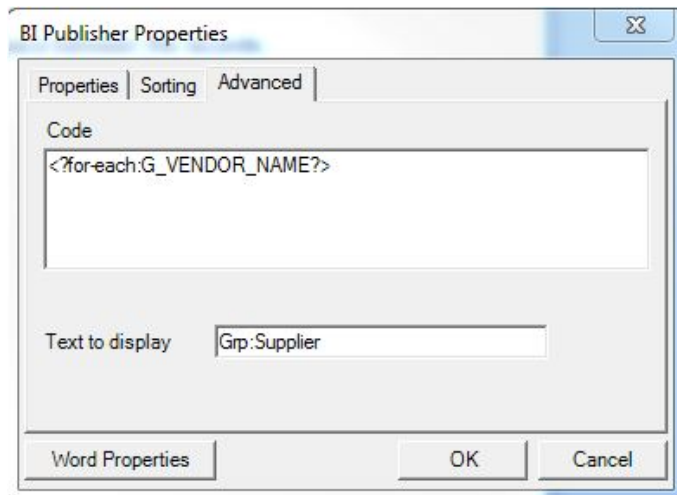

Notes

1. Increasing the amount of vertical space between the data row and the End Supplier field will increase the space between the records.
2. ***A sample of the output can be seen on the second page.***

Grp:Supplier

Supplier: Supplier 1 **Address:** 1 Long Avenue

End Supplier

Supplier: Nuts and Bolts Limited **Address:** 1 El Camino Real, Redwood City, CA 94065
